

exercise,

in this we can change the size of the image from the height and height, and use a user interface using the OutlinedButton widget, which displays written text. And use the SizedBox widget.

- Change the image width and height to 200 pixels together.
- Create an OutlinedButton widget that displays the text "Cancel".
- Create a function called Cancel that prints the canceled button that was clicked, and passes it to the onPressed parameter of the OutlinedButton widget created in the previous step.
- Change the background color of the OutlinedButton widget to Colors.purple
- Add 10px padding to the OutlinedButton widget at the top and bottom only.
- Add 60 pixels of space to the OutlinedButton widget using the SizedBox widget.
